JacobSyndeo

SUMMARY Senior software engineer with deep Swift and Apple-platform experience, proven full-stack breadth, and a strong track record in architecture, reliability, and UX polish. Recent work spans the NBA flagship app, award-winning retail experiences, mission-critical field tools, and AI-assisted development workflows.

Open to senior roles across product, platform, and AI-enabled systems.

Experience

National Basketball Association — Dec 2023 – Present

Shipping app-wide systems and UX improvements across onboarding, routing, analytics, ads, video playback

- Refactored analytics across five providers, resolving long-running data drift and restoring confidence in reporting and decision-making
- Led a major architectural refactor: modularized core domains behind protocol-driven interfaces, reducing coupling and enabling safer incremental changes
- Unified deep link and Universal Link routing into a single parsing and validation layer, eliminating a class of regressions and simplifying new entry point rollout
- Led development of a new onboarding flow for an upcoming release, rebuilding legacy UX while modularizing the codebase and enabling server-driven configuration and robust A/B testing
- Built the video download and caching layer to reduce redundant requests and improve offline reliability under variable connectivity
- Integrated complex entitlement checks across TV providers, League Pass, Amazon Prime Video, and blackout logic to guide fans smoothly into watch flows
- Rebuilt the internal Dev Zone, speeding issue reproduction and improving debugging workflows for NBA staff and third-party integrators
- Rebuilt the game schedule calendar and refactored the banner ad system to improve rendering reliability and reduce ad-related UI issues
- Refined the launch experience to improve first-run polish and harden startup behavior
- Refactored and redesigned the NBA VideoKit SDK reference app to improve integrator onboarding and reduce integration back-and-forth

Renewed Vision — May 2023 – Nov 2023

Developed ProPresenter, a macOS app used by thousands of churches every weekend and by businesses including Chick-fil-A and Mercedes-Benz

- Led delivery of the Test Patterns UI configurator panel, combining SwiftUI, Metal, and a Rust-backed framebuffer layer while aligning engineering, QA, and product for release
- Modularized a multi-million-line codebase with Swift Packages, improving build iteration and enabling parallel development across teams
- Authored architectural documentation for complex subsystems, reducing tribal knowledge and accelerating onboarding and maintenance

Comcast

Feb 2019 – Apr 2023

Built the Xfinity Meter suite - software and tools that hundreds of thousands of field technicians depend on daily to test and diagnose Comcast cabling infrastructure

- Built the Xfinity Meter Fiber app end-to-end, earning full ownership after prior success delivering XM
- Re-architected core systems and created shared support libraries, reducing duplication and enabling faster, safer feature development
- Drove major refactors to retire legacy patterns and establish clearer architecture and best practices across the codebase
- Processed and visualized real-time device telemetry via REST and WebSockets, supporting field diagnosis workflows at scale
- Improved reliability by expanding unit test coverage and driving library-based reuse across the codebase

Owlet

Jul 2018 – Dec 2018

Developed the Owlet Cam integration within the Owlet Care app, requiring tight IoT integration with cameras running embedded Linux

- Built streaming support for live and recorded camera video inside a safety-critical consumer product experience

Branding Brand

Aug 2016 – Aug 2017

Built and shipped apps for iconic retail brands including Burberry, Arc'teryx, Ace Hardware, and Party City

- Core contributor on the Burberry iOS app, delivering key flows including authentication and product detail experiences on a 3-person team
- Partnered closely with design and product to translate high-end brand standards into fluid, production-ready UI
- Winner - Glossy Awards "Best Mobile App"

YinzCam

Dec 2014 – Jun 2016

Part of the iOS team behind YinzCam's fleet of 100+ official apps for sports teams across the NFL, NBA, NHL, NCAA, NRL, and more

- Led the Apple Watch initiative, shipping WatchKit apps for 50+ clients shortly after launch to expand product value and differentiation
- Initiated and advanced the Objective-C to Swift migration, improving maintainability and enabling modern iOS patterns
